‘Funding automatic for good ideas’

HUBBALLI: "An entrepreneur should not be worried about the money needed to build his venture. If your idea is good, convincing, and brings benefit to the society, money will come automatically from interested investors," noted Lucknow-based Edugorilla founder and CEO Rohit Mangalik.

Speaking after inaugurating the 'Mad's Meet' startup fest held at KLE'S Institute of Management Studies & Research (IMSR) here on Saturday, he noted that success of an entrepreneurial venture depends largely on passion, expertise, and good communication.

An entrepreneur must be passionate about his idea to bring change in society. He must develop essential expertise in it, and must have good communication skills to sell his idea to people.

Some failures are bound to take place in the initial stages of entrepreneurial venture, but over a period of time, the entrepreneur learns from his mistakes and emerges successful, Mr Mangalik said.

One need not be excessively worried about failures in entrepreneurship, as the venture has to be started with a strong self-belief.

You can crystallise your business idea by discussing it with your mentors and shape it properly so that it turns out to be a success story, he added.

Kamal Trading Corporation managing director Mohit Mehta stated that entrepreneurial ideas can come from any direction.

IMSR Director P B Roodagi stated that entrepreneurship

Green Day 2018

As part of World Environment Day for encouraging awareness and action for protection of the environment, Green Day was celebrated at college on June 5 2018. 'Beat Plastic Pollution' was the theme for 2018 and host India was India, New Delhi being the host city. Director Prasad Roodgi presided over the event and inauguration was done by planting a sapling along with Chief Guest of the event. Dr. Roodgi opined that people may strive to change their everyday lives to reduce heavy burden of plastic pollution. He further said people should be free from over-reliance on single use or disposables as they have severe environmental consequences and we all should liberate our natural places, our wildlife and our own health from plastics. All the faculties of KLE IMSR along with few students were part of the event.

What Technology Startups must get right to Globalize early and rapidly?

Darshith Pattanshetti

2013-2015 Batch

Email ID: darshit92@gmail.com

Upon or shortly after inception, growth-oriented technology startups must operate in a market that is global. Management teams and investors of technology startups can benefit from approaches and models that can help them operate in a global market early and rapidly. How well a technology startup addresses the realities of globalization will determine its success. A better understanding of what management teams and investors of technology startups must get right to globalize their startups is needed. This article is an attempt to meet this need. In this article, lessons that have been extracted from six literature streams and from information on 21 startups founded in 12 countries are used to identify the six elements that a startup must get right to globalize early and rapidly. These six elements are: i) Problem scope, ii) Stakeholders' commitments, iii) Collaborative entrepreneurship, iv) Relational capital, v) Legitimacy, and vi) Global capability. The main contribution of this article is that it throws the spotlight on the need to develop prescriptive rules and practitioner-oriented models that can help a technology startup operate globally from an early stage.

Introduction

What must a management team get right to globalize a technology startup early and rapidly? How can a management team fill the gap between their startup's need to successfully operate in a globally integrated market and their startup's lack of resources and skills?

Technology startups that globalize early and rapidly will win over those that do not. The earlier a startup globalizes, the stronger will be its capability for exploiting growth-seeking opportunities worldwide. Early globalization increases a company's adaptability to uncertain environments and its willingness to change. Managers globalize a technology startup early and rapidly to: i) increase the value of the startup, ii) reduce revenue source risks, and iii) increase the size of the startup's addressable market.

Over the last 20 years, scholars have contributed various perspectives to explain the early and rapid involvement of startups in international markets. However, conventional approaches used to globalize technology startups take too long, cost too much, increase stakeholders' risks, and waste the passion of many talented people who develop innovative products and services. The objective of this article is to help the management teams of technology startups and their investors to identify what they need to get right to globalize their companies (i.e., address the needs of a global market), early and rapidly. The article provides a set of key messages extracted from the literature, and it develops six elements (i.e., building blocks) into a unified model on how to globalize new technology ventures early and rapidly. In addition to entrepreneurs, management teams, and investors, academics, service providers, managers of economic development organizations, and policy makers can also benefit from a better understanding of the implications that these approaches and models have for the ways in which they currently support regional and local economic development.

Messages from Examining the Literature

The scholarly work most relevant to a startup's early and rapid globalization can be organized into six literature streams:

1. Rapid internationalization
2. International new ventures
3. Effectuation logic
4. Global startups
5. Gradual internationalization process models
6. Internalization theory of the multinational enterprise and the ownership-location-internalization (OLI) model

Propositions for Globalizing a Technology Startup Early and Rapidly

The lessons learned from examining the literature can be applied to the globalization of technology startups from inception. These lessons can be organized in terms of what managers need to do to globalize a technology startup early and rapidly, as follows.

1. *Acquire and deploy knowledge quickly*
2. *Secure commitments to act jointly and quickly*
3. *Use the Internet*
4. *Build relational capital*
5. *Gain legitimacy*
6. *Strengthen global capability*

Conclusion

In this article, key messages were extracted from six literature streams relevant to the globalization of technology startups. Then, the lessons were organized in terms of what managers need to do to globalize a technology startup early and rapidly. Three lessons learned from examining the information on a sample of 21 startups found to have increased foreign sales early and rapidly were described, and the six elements of the architecture for the rapid globalization of a technology startup were proposed. The main motivation for writing this article was to highlight the need to develop norms and practitioner-oriented models that can help technology startups better manage their early and rapid globalization. We hope that researchers will increasingly focus their attention on the development of approaches and models that can assist management teams internationalize their startups early and rapidly.
